

### Initial feedback for Emma

- Buttons aren't legible
  - Also need to all be on every page
  - Center text in hexagons
  - Try black for text
  - See if you can add a small black element to make it feel more balanced (a small bee?)
  - Use hexagons for shapes (right now half of your shapes are 8 sided)
- Needs to have header and buttons on every page
  - Make sure hierarchy is established
- Intro page
  - Header and title are currently off center
- Big hexagons
  - I like the shift from page to page where biggest background hexagon goes from white to light yellow alternating but make shapes same size/line up on page (it's a little off rn)
  - Be mindful in terms of intersections between bigger hexagon shapes, looks messy rn
- Headers
  - Make them a consistent size
  - Make sure they are actually centered
- Add some photos!
  - Look at resources I gave in Topic Write-Up
- Add either a sources page or sources footer
- Put in actual text to get an accurate sense of copy length for each section (also provided in Topic Write-Up)
- Feel a little plain atm
  - Add images and create more of a system to make it feel more engaging!

### Moving Forward with Site (post discussion)

- Everything above for the most part except simplifying the use of hexagons
  - Decided to just use hexagon pattern rather than shapes (too hard to code)
  - Simpler background for the same reasons
- list out modern beekeeping in this order:
  - natural
  - urban
  - indoor
